

ESI announces unified EWDM driver for Windows Vista and other main Windows versions

– the NAMM show, booth #6832

Anaheim, California – January 16th 2007 – ESI Audiotechnik GmbH today announces the release of a new unified EWDM driver for all current Windows versions for selected ESI and AUDIOTRAK products.

The new unified EWDM (Enhanced Audio Midi Driver) driver consists of a single certified driver package that is compatible with all current Windows versions supported by Microsoft, including Windows 2003, Windows XP Home, Windows XP Professional, Windows XP Professional x64, Windows Vista 32-bit and Windows Vista 64-bit.

This new driver inherits all main EWDM features such as ASIO support with lowest latency and exclusive DirectWIRE features depending on the features of the product used. No matter which Windows operating system is used, always the same driver package with similar functions are available – it could not be more simple.

"We are excited to show the latest updated EWDM driver technology at NAMM 2007. Our users can expect virtually the same functions with the same driver, no matter what Windows version they are using." says Chess Lim, CEO and founder of Ego Systems, Inc. – the R&D center for ESI in Korea.

The new driver will be made available for selected ESI and AUDIOTRAK products, like Juli@, MAYA44 or Prodig HD2 on the new ESI website www.esi-audio.com after NAMM show. Updated drivers for other products will follow.

ESI Audiotechnik GmbH is one of the leading vendors for professional and semi-professional audio equipment worldwide. ESI, AUDIOTRAK and various OEM products developed by Ego Systems, Inc. are well known and used daily by hundreds of thousands of customers everywhere in the world.
